

Welcome to the World of

Smart Connected Airports

Asset Tracking & Incursion Management System

THE MOST FLEXIBLE AND ADVANCED INCURSION MANAGEMENT SYSTEM ON THE MARKET

ATIMS™ – is a GPS vehicle-based moving map touch-screen display that provides airfield vehicle operators with their precise location, direction of travel and most importantly, a warning of any impending safety issues. ATIMS™ provides a proximity alarm to alert vehicle operators when approaching critical points on the airfield so that action may be taken before an incident occurs.

Customizable to all airfield zones, ATIMS™ delivers alerts for Hold Line Markings, ILS Critical Areas, Runway Safety Areas with both standard and non-standard dimensions, and other areas as required.

- Configured as stand-a-alone or a networked solution across numerous airfield vehicles and assets.
- View all vehicles on the system or layer the system by viewing specific vehicles.
- Collect and store vehicle operations data such as speed, route etc.

Also available ATIMS™ Lite, an audible version for safely operating in aircraft movement zones. The warnings can be customized to both voice and tone.

**Brought To You By the Innovation
Experts at Team Eagle**

**Meets and exceeds FAA Advisory
Circular 150/5210-25 - RIWS &
150/5220-26 - ADS-B Equipment.**

ADS-B

ATIMS™ Lite

ATIMS™

Designed for airport ground vehicles operating in aircraft movement areas - accurate down to metres in real-time.

Geo-fences can identify restricted areas and provide audible warnings.

Equipped vehicles appear on screen.

View, command and control airfield operations from your desktop or any equipped station using an actual orthographic image of the airfield.

**REGULATORY
COMPLIANCE**

FAA Advisory Circular
150/5210-25
“Performance
Specifications for
Airport Vehicle RIWS”.

**ENHANCED SAFETY
& OPERATION
EFFICIENCY**

Airfield command and
control from the desktop
and/or in cab.

INTEGRATION

Seamlessly integrates
with Team Eagle’s
AIROps™ professional
electronic airfield
inspection and reporting
applications.

ATIMS™ allows for viewing of airfield vehicle activity, both in real-time and historically, right from the manager’s desktop using GPS technology. Each vehicle is tagged for easy identification and various operations such as vehicle speed, route travelled, etc.
