

# Your Airfield Solutions Partner

## Airfield Operations Software & Analytics

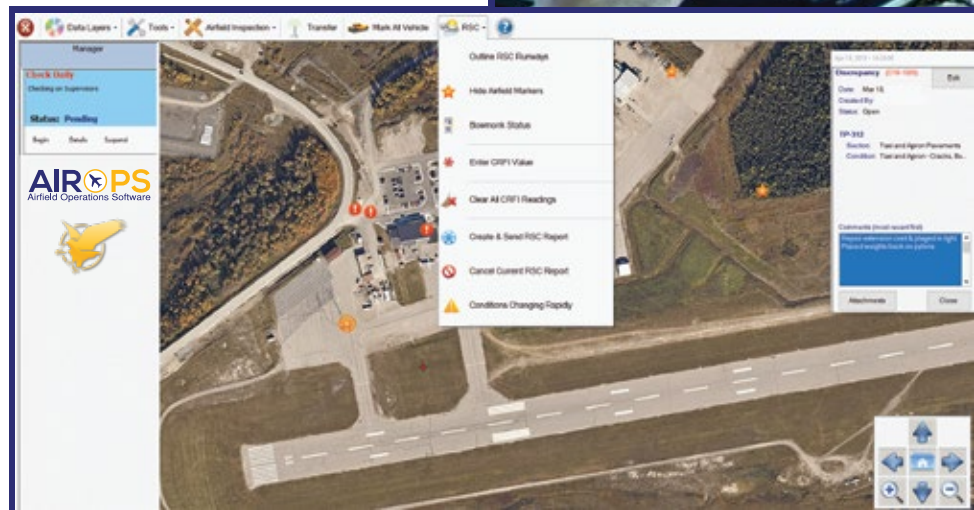

### AIROps™

A suite of professional airfield operations management software and data analytic applications designed to increase situational awareness, demonstrate regulatory compliance, and optimize overall airfield operational efficiency.

The user interface is intuitive and highly configurable based on specific regulatory environments.

Mobile and vehicle based applications are device agnostic and can be used with Windows, Android and iOS devices.

Offered as a fully hosted subscription service or as a traditional client-server installation.

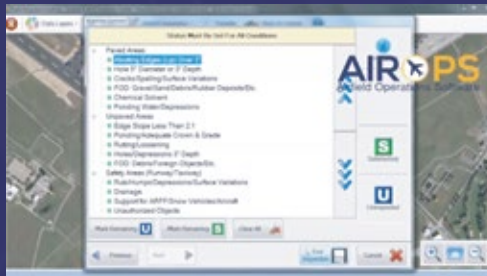

**AIROps™ is an electronic airfield inspection system that helps airports with Part 139 (US), TP312 (Canada) and ICAO compliance requirements.**

# AIROps™

## General Inspection Part 139/TP312

Issue work orders, reports, and graphical NOTAMS on the fly.

## Checklist Builder

Build custom checklists for your airfield.

## Bird & Wildlife

Collect, analyze, and report bird and wildlife observations.

## WinterOps™

Collect, store, analyze and report runway condition measurements (friction, braking availability, & temperature).

## ChemicalOps™

Collect, store, analyze, and report airport chemical applications.

## ElectricalOps™

Electrical fixture inspection and reporting.

## Daily Log

Manage and track airfield team member activities.

## Runway Surface Condition

Collect, store, analyze and report runway conditions. Compliant with FAA TALPA and ICAO GRF reporting formats.

## SMS

Customized to support specific SMS objectives.
